Experience

Landscaping Template, Remote | <https://landscaping-website-template-ten.vercel.app/>

Junior Front End Developer, April 2026 - April 2026

- Designed a responsive and modern website template tailored for landscaping, lawn care, and gardening businesses to enhance online presence and customer engagement.
- Implemented smooth animations and interactive transitions to create a more polished and engaging user experience.
- Developed seamless, smooth-scrolling navigation for improved accessibility and intuitive page interaction.
- Structured and organized dynamic service data to clearly showcase business offerings and improve content presentation.
- Focused on clean UI/UX design principles to deliver a visually appealing, mobile-friendly, and performance-optimized website experience.
- Used NextJS, Tailwind, and JavaScript to build the UI,

SaveSpend, Remote | <https://save-spend.vercel.app/>

Junior Front End Developer, October 2025 - December 2025

- Developed a responsive personal finance web application focused on helping users track spending habits and better understand where their money is being allocated.
- Built interactive data visualizations, including a pie chart dashboard, to provide users with clear insights into spending categories and financial trends.
- Built with Next.js, Tailwind CSS, Firebase, and the OpenAI API, it guides users through budgeting, tracking expenses, and even chatting with an AI finance assistant for personalized tips.
- Implemented a planned spending system that allows users to organize budgets and manage upcoming expenses more effectively.
- Created dedicated bills and subscriptions management sections to help users monitor recurring payments and improve financial awareness.
- Designed a savings goals feature that enables users to set financial targets and track progress toward achieving them.
- Integrated an AI-powered assistant to provide users with a more interactive and engaging financial management experience.
- Focused on modern UI/UX design, responsive layouts, and smooth user interactions to deliver an intuitive and user-friendly application experience.

Skintrix AI, Remote | <https://skintrix-project.vercel.app/>

Junior Front End Developer, March 2025 - April 2025

- Designed and deployed a real-time skin analysis platform using OpenAI Vision API and Next.js 14, achieving 98% accuracy across a wide range of skin conditions
- Built a fully responsive UI with TailwindCSS and GSAP, featuring dynamic skincare recommendation cards that boosted user engagement by 60%.
- Enhanced performance through Next.js Server Components and Lottie animations, delivering skin condition analysis in under 2 seconds.
- Created a modular component library with TailwindCSS for skincare product listings, accelerating A/B testing and layout iteration.
- Engineered an efficient image processing pipeline integrating OpenAI Vision API and a 4D Mini model to improve accuracy in detecting skin tone and texture variations.
